

Report on Swachhta Abhiyan

In the connection of Swachhta Abhiyan, following steps have been carried out and regularly being done.

1. HRI has its own sewage treatment plant and waste water from that is recycled. The quality of treated water gets checked time to time from laboratory. This water is being used in gardening work by sprinklers to keep the campus green.
2. Aesthetic view of the campus is always ensured, cleanness in canteens, toilets & Guesthouse Mess is ensured all the times.
3. Office rooms, toilets etc. are cleaned daily (Toilets twice a day).
4. For disposal of garbage, dustbins are placed at several different locations in campus. Garbage collected in dustbins is disposed – off from the campus regularly by outsourced agency. For ensuring more hygiene, an arrangement has been made to keep the bigger dustbin inside the enclosure, so that during throwing/collection of garbage in it, the garbage may not spread in open area around the garbage container (photograph of enclosure is enclosed).
5. Some pole mounted small dustbins are also placed at different location in campus so that Institute members/outsideers even children use them easily of throwing small waste stuff.
6. Repainting of kitchen of mess and pantry is done on regular interval in view of hygiene. The painting in housing/common area is also done after due minimum interval period in a phase manner as & when required.
7. HRI is most environments conscious campus with perfect eco-friendly environment. Time to time a cleaning drive is also organized by Institute members (Faculty/Staff/Students) on voluntary basis.
8. Some of photographs are attached in above reference.
